

HYPERTEXT MARKUP LANGUAGE

HYPERTEXT MARKUP LANGUAGE

What is HTML?

HTML (HyperText Markup Language) is the structural blueprint of a webpage that tells a browser how digital content should be arranged, connected, and displayed using tagged elements such as text, media, links, and interactive sections. It acts like the skeleton of the web, giving meaning and organization to everything users see and interact with online.

HyperText refers to the links that connect one web page to another.

Markup Language means a system of tags used to organize and display content in a web browser.

So, HyperText Markup Language (HTML) is a language used to create and connect web pages using tags.

What is an HTML Element?

An HTML element is a webpage unit made using an opening tag, content, and a closing tag. The content is written between the tags to display information in a browser.

Syntax:

`<tagname>content<tagname>`

Example:

`<p>This is a paragraph.</p>`

Here,

`<p>` is the opening tag .

This is a paragraph content between the tags

`</p>` is the closing tag

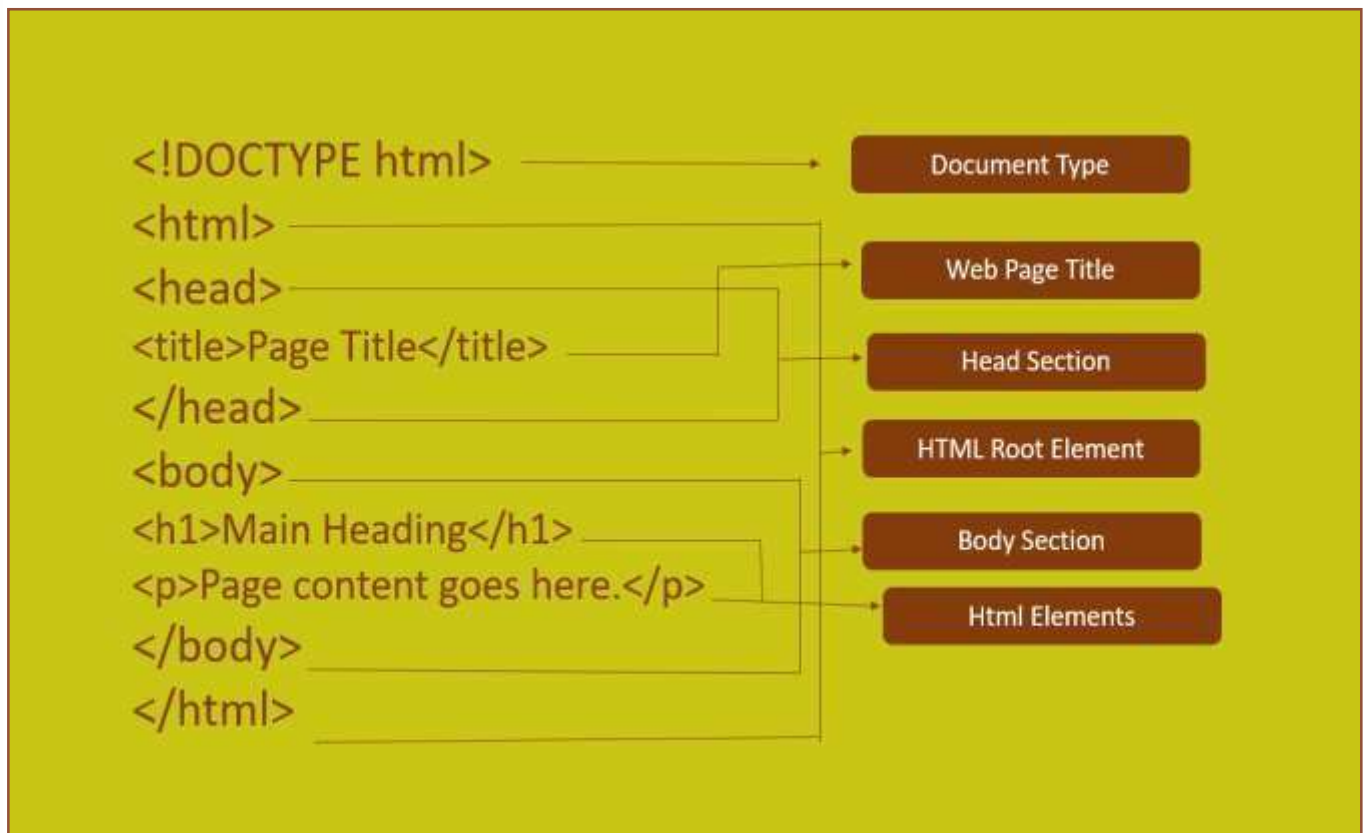

HTML Page Structure

HTML page structure is the organized layout of an HTML document that helps a browser understand and display webpage content correctly.

A basic HTML page contains important tags such as `<DOCTYPE html>`, `<html>`, `<head>`, `<title>` and `<body>`.

HTML BASIC STRUCTURE:

Where,

- `<DOCTYPE html>` – Declares the document as HTML.
- `<html>` – Holds the complete webpage code.
- `<head>` – Contains page information, styles, and scripts.
- `<title>` – Sets the webpage title shown on the browser tab.
- `<body>` – Contains all visible webpage content.
- `<h1>` and `<p>` – Represent heading and paragraph elements.
